FROM THE ROAD **TO THE WATER**

C4 was born in 1986 thanks to the passion of Nicoletta and Marco Bonfanti.

Until the mid 1980s, bicycle forks and frames were all manufactured with metal tubes. Marco Bonfanti has a revolutionary idea and designs AERO: the first carbon fiber monocoque bicycle frame in the world.

The revolutionary process for the moulding of carbon fiber, called NJC (No Joint Construction) allows C4 to manufacture complex structures in composite materials which are hollow and without junctions. This manufacturing process will be the technical base on which future products will be designed and developed.

In 1989, Marco Bonfanti, passionate about diving, manufactured the first carbon fi-

ber fin blades in the world. It is a leap forward and the world of freediving will never be the same.

MADE IN **ITALY**

C4 has pursued, in the years, a technical and functional vision with a focus on the design of its products.

New models of fins have been developed

through the years and in 2000 C4 introduced to the market MONOSCOCCA: the first speargun in the world manufactured with a monocoque carbon fiber hollow structure.

INNOVATION AND **DESIGN**

In 2019 a new important era begins for C4. The Ciceri brothers, former owners of Omersub, purchase a major part of the company.

Today, C4 is a company with deep roots

ENVIRONMENTAL **CONSCIOUSNESS**

in the North of Italy and its products are distributed all over the world. The manufacturing of the carbon fiber blades is entirely carried out in Italy through an innovative and environmentally friendly process.

Every C4 product features an exclusive design and they are designed, prototyped and tested

internally at our manufacturing facilities in Albiate (MB) and Olginate (LC).

Innovation, design and the continuous search of performance are at the base of all C4 products and they are an integral part of our DNA.

FOOTPOCKET

MADE IN ITALY

FOOTPOCKET 200

The rational revolution
“made in C4”

The first and only diving shoes in the world to allow customization of the biomechanics of kicking, they feature a minimum mass, a new concept of hydrodynamics, specific mechanical performance, very high comfort and an elegant and exclusive design.

SOLE

Made of polypropylene, it has a progressive rigidity and constitutes the supporting skeleton of the 200. In the insole, 3+3 threaded brass bushes are co-molded for the customisable connection of the blade.

UPPER

Characterised by its reduced thickness, the upper is overprinted directly to the insole. To better adapt to the physical characteristics of people, the upper is made in two different hardnesses, 65 Sh for the smaller sizes and 74 Sh for the larger ones (see table).

HYDRODYNAMICS

The geometric separation between the shoe and the blade generates an advanced hydrodynamics, eluding the classic resistances of traditional fins. The fluid threads flow around the shoe and the blade works, along its entire length, creating non-turbulent fluid threads. non-turbulent fluid threads. filetti fluidi non turbolenti.

FIT

The 200 have the classic anatomy of C4 footpockets with a pre-shaped angle of 3°. The reduced thickness of the upper and the elasticity of the material allow an easy fit and high comfort. The upper wraps the foot without creating impediments to the blood flow, allowing it to maintain its warmth for a long time.

NEW

PESO	starting from 150 gr
ANATOMIA	pre-shaped angle of 3 °
COLORI	White - Red - Green
PALA	Compatible with 200 footpockets only
MATERIALE	UPPER: Thermoplastic elastomer. SOLE: Polypropylene

3+3

On the 200 the biomechanics can be customised by allowing to position the blade in three different 3 positions. By changing the position, the force levers between the foot and the blade are modified with a consequent personalisation of the kick.

PROTECTION

The heel of the 200 shoes has three anti-slip pads to protect the foot. A polyurethane shock absorber is positioned between the shoe and the blade to dampen the stress peaks on the blades.

Assembly kit for 200 footpockets

OKC4200N

FOOTPOCKETS 300

The 300 footpockets are extremely light, resistant to wear and preformed at an angle of 3°. They are very comfortable and easy to wear. They are featured in 9 sizes and, from size 40 to size 44, they are available in each single size.

MATERIAL

The exclusive and special material is seven times more resistant to wear than traditional thermoplastic materials. It is reactive like a low energy absorption spring making the 300 footpockets light, sturdy and highly resistant.

FIT

By studying the anatomy of the human foot we have designed this new fit that enhances the comfort and the connection between the foot and the fin. Thanks to this system, wearing these footpockets is smooth and easy.

ANATOMY

The 300 foot pockets fit like a glove, thanks to the new exclusive anatomical shape.

MADE IN ITALY

FOOTPOCKETS 400

Footpockets 400 are manufactured in synthetic thermo rubber. Thanks to their design, they are extremely efficient and they only weigh 390gr (13.75 oz). Because of their anatomical shape, they are comfortable and easy to wear. The foot is pre-shaped at an angle of 3°. They are available in two colours: black and white.

FIT

The footpockets horns are extended all the way back to the heel for a more efficient transmission of energy. The interchangeable blade is mounted on the footpocket with a safety screw.

ANATOMY

Comfortable and sturdy with a weight of only 390gr (13.75oz)

MATERIAL

Their reduced thickness and the elastic thermo rubber material make them easy to wear.

FOCUS ON CARBON FIBER

Carbon fiber, carbon fiber fabric and how it is used.

Carbon fiber is material which is produced initially in a thread. Thousands of these threads, together, make up a bigger thread which is then used as a standard fabric and can therefore be braided and woven to create a carbon fiber cloth.

Carbon fiber fabrics are used to create a variety of “composites” which are called this way because they are made up of carbon fiber and a so called matrix, generally a resin. The matrix keeps the fibers in place so that they can be in the correct position and work efficiently. It also protects the fibers and keeps the product in its original shape.

Many different carbon fiber fabrics. How do we choose the best one for our application.

There are many different types of carbon fibers which feature a different resistance and elastic module. Excellent fin blades must be resistant and, at the same time, they must be flexible and reactive. These characteristics are achieved by using High Tensil fabrics which have the best elasticity among all carbon fibers, in combination with a low percentage of resin in the composite.

A further improvement is achieved by using “Spread Tow” fabrics. These fabrics make the blades highly reactive and prevent breakings. C4 blades are extremely resistant and reactive and they maintain their features over time.

200

MADE IN ITALY

For over 30 years, C4 has been designing and manufacturing carbon fins in Italy. C4 was the first company in the world to produce carbon fiber fins and has gained an unparalleled experience that has led today to the creation of the 200 fins: a unique product of its kind. In the fins 200 the resonance frequency of any elastic structure, normally known as the elastic response, is particularly enhanced by the special and dedicated lamination of the blades.

Four different types of carbon fiber have been engineered to give the blades a curvature with the consequent resonance, predefined in the design phase.

The industrial production system of C4 has made it possible to eliminate approximations and inhomogeneities typical of manual craftsmanship.

NEW

The 200 feature new and specific 100% carbon fiber blades. Designed, manufactured and tested in C4, they offer a completely new progressive lamination, made with 4 different types of carbon fiber, reaching unprecedented levels of reactivity and resistance.

WATER RAILS.

Thanks to an exclusive production process, property of C4, the water rails of the 200 series are co-moulded on the blades. This particular technology allows the elimination of gluing and allows the application of water rails of complex shapes made with elastic and highly tough thermoplastic materials.

L-1090 APNEA

MADE IN ITALY

These fins are specifically designed for deep sea fishing and they feature an hydrodynamic anti-turbulence flap. Dedicated blades are available in three stiffnesses: 25 (soft), 30 (medium) and 35 (medium-hard). Paired with 200 footpockets, they feature a visible carbon fiber graphics and colouring in black and military green, for the logos, water rails and the footpockets.

SIDERAL HT

*Available for the Chinese market only.

MADE IN ITALY

SIDERAL HT are extremely bright and shiny. Thanks to these features they increase the safety of deep sea freedivers and they can also create a “flasher” effect very useful for blue water hunting. SIDERAL HT are very light, only 600gr (21oz), and they feature 300 foot pockets in black color and blades made in HT ALU 15T carbon fiber. The blades can also be mounted on the 300 footpocket in silver color.

OVERMOULDING PROTECTION SYSTEM

(O.P.S. TECHNOLOGY)

O.P.S. is a revolutionary manufacturing process which features the overmolding of thermorubber to create a protective cover on the tip of the blades. It's the first time that plastic thermorubber is being overmolded on carbon fiber. This has been a true challenge. We have conducted tests for over a year which our fins have succe-

ssfully passed after 300 hours in the water. Overmoulding thermorubber, compared to traditional gluing, has allowed us to work with specific dimensions and geometries which have not compromised the classic technical features of our fin blades (reduced weight, great elastic modulus and power)

TANK T-34 NEW

MADE IN ITALY

TANK T-34 fin blades are ideal for spearfishing in waves and foam, especially in cold and shallow waters. They are extremely reactive with an excellent performance even if they feature a reduced length. They are eclectic and they can be used in different spearfishing situations even with deep dives (0-20mt). The blades are compatible with 300 and 400 footpockets.

MATERIAL	Carbon Fiber T300
BLADE HARDNESS	30 medium

MR. CARBON 2.0

Mr. Carbon 2.0 is a monocoque speargun entirely manufactured in 100% high modulus carbon fiber. It is an hydrodynamic speargun featuring a rigid barrel for very sharp and stable shooting.

It is shaped as a cuttlefish bone with a reduced head and a higher volume towards the hand. This shape makes it well balanced and easy to handle in the water. It features an integrated shaft guide over the whole barrel.

The muzzle of Mr. Carbon 2.0 features an exclusive and unique design. It's entirely made in stainless steel and it has a very small size making it highly hydrodynamic.

The behindhand triggering mechanism is C4 "Auto-R" and the trigger are entirely manufactured in stain-less steel AISI 316. The releasing mechanism is made by punching and nailing which make it rust proof, resistant to wear and extremely solid.

MONOFILAMENT POSITIONER MADE OF THERMOPLASTIC MATERIAL AND GLUED TO THE BARREL

The muzzle allows the traction of the slings to be perfectly parallel to the shaft, maximising propulsion and the exiting velocity of the shaft.

Single or double slings can be assembled on the Mr. Carbon 2.0 muzzle. A line holder, made in stainless steel, is positioned under the muzzle, screwed on the barrel.

The triggering mechanism features an integrated line releaser that can be positioned on the left or on the right side. The line holder on the muzzle can also be positioned either on the left or on the right side.

Sold with two Polypropylene anatomical and adjustable handles. The carbon fiber handle butt is covered in soft thermoplastic material to enhance stability during the charge. Upon request, the left anatomical handle is also available.

It features a special fitting to position the reel C4 Hercules and a second fitting on the hilt to position the reel C4 Vertical.

GLADIUS is a monocoque speargun **entirely manufactured in 100% high modulus carbon fiber.**

GLADIUS is a fast hydrodynamic gun featuring a rigid barrel for very sharp and stable shooting. It is versatile and **can be used for different types of hunting.**

It has a shape of a cuttlefish bone with a reduced head and a higher volume towards the hand. This shape makes it well balanced and easy to handle in the water. It has an integrated shaft guide over the whole barrel.

The behindhand triggering mechanism is C4 "Auto-R" with an integrated line releaser that can be positioned on the left or on the right side. The mechanism and the trigger are entirely manufactured in stainless steel AISI316.

GLADIUS is sold with **two anatomical and adjustable handles.** The

head, which is integrated in the barrel, is made entirely in carbon fiber and can feature single or double latex bands with a diameter up to Ø18mm. On the head there are two hook shaped stainless steel line holders on the sides and one line holder screwed to the bottom of the barrel.

The handle butt is covered in soft plastic material to have more stability during the charge. GLADIUS can mount C4 HERCULES reels.

SPEARGUNS

GLADIUS CAMO

GLADIUS CAMO and CAMO OCEAN are the camouflaged version of the standard GLADIUS speargun.

Inspired by animal camouflage it has been designed by hand by digitally painting a "textured skin" which makes the carbon fiber background visible. The final effect is similar to turtle skin and the colours of a spotted stingray.

The CAMO version is ideal for mediterranean type of settings while the CAMO OCEAN model is indicated for blue water fishing.

VERTICAL REELS

C4 Vertical are speargun reels for vertical use, made of AISI 316 stainless steel and thermoplastic material.

The main structure and the arm are made from sheet metal, by laser cutting and bending and features simple and minimal geometries. The weights, reduced to a mini-mum, thus have little influence on the set-up of the speargun.

The spool is made of polypropylene, through mechanical processing to ensure maximum precision of the parallelism of the external planes, thus enhancing an optimal rotation.

The friction of the reel, very light, is designed to remain as set, even with the traction on the line, to allow quick recoveries.

The exit of the line, during the rotation, is guided by two cylinders that avoid unwanted tangles.

Three models of different sizes are available. The capacities, with a $\varnothing 1.5\text{mm}$ line, are respectively: 20m, 35m and 50m.

SPEARGUN REEL **HERCULES**

0KC4HER65

The structure of the HERCULES reel is entirely manufactured in stainless steel AISI304 with the main crank assembled by welding. The spool, featuring a $\varnothing 92\text{mm}$ and height of 47mm, is made in Polypropilene and it has a capacity of 65mt $\varnothing 1.5\text{mm}$ line.

- Trapezoidal brake system.
- Tension knob manufactured in autolubricating POM material with a trapezoidal thread.
- Brake disc in stainless steel.
- Comes with two stainless steel winding arms: a collapsible arm and an extendible one.
- Easily replaceable $\varnothing 10\text{mm}$ sliding line guide made in POM.
- Total height with folded handle 67.5mm
- Total weight 280g.

PRIMELINE **LATEX TUBING**

Exclusively made for C4 by Primeline Industries, this new latex tubing features a fluorescent orange colour and it is **available in 3 different dimensions**.

Since 1982 Primeline Industries has produced the highest quality latex tubing for the spearfishing industry. Primeline has developed a unique latex tubing with unique properties that improve the performance of any spearguns and this quality is recognised unanimously around the world. The latex raw material is a milky substance extracted from plants principally the *Hevea Brasiliensis*. Unlike other producers Primeline doesn't dry the substance prior to working it thereby not breaking the polymer chain. **The outcome is a more elastic rubber with higher resistance to tear.** Primeline's unique physical properties are owned by the production process known as continuous dip which creates pure latex rubber in layer after layer. This long and laborious process creates a **superior rubber**. It produces a virtually protein free latex with more antioxidants than any other latex which it owes its long aging properties to. The 16mm speargun rubber developed for C4's new STANDARD rubber is dipped 125 times whereas the Small ID 16mm is dipped 172 times. After the initial "soak off" which is a loss of stretch inherent in every rubber (9% for Primeline) the C4 Orangebull Standard loses less than 2% per hour. These are the diameters in which the tubing is available and they are

delivered in rolls of 15mt.

16mm Standard Outside Diameter. 5/8" OD with a 3,2mm / 1/8" ID hole this rubber has the most reliable and renowned advantages of pull effort and power. This thickness is an ever popular standard of the speargun industry. Combines all the advantages of power, pull effort to 350% and Primeline's properties.

14mm Small ID.

The 14mm Small ID with 9/16" OD and 1,6mm / 1/16" ID hole is increasingly popular for multi-band applications, generating more power than Standard 1/8" hole rubber. Especially well suited for large blue water guns.

16mm Small ID.

The 16mm Small ID with a 5/8" OD and 1,6mm ID hole is the most powerful 16mm rubber on the market. It combines the punch and power of 16mm rubber with the extra volume in the rubber to produce more energy without losing any of its high modulus characteristics. Ideal for single and double band applications.

WETSUITS

Two piece wetsuits made in single lined neoprene with an elastic camouflaged lining. The neoprene rubber is certified for the absence of any chemical materials which can damage the environment or human health such as phthalates and latex. It also features great resistance to compression and an excellent elastic return.

The pants and jacket have a preformed design and the small number of panels used to assemble the wetsuit allow for less sewing hence greatly increasing the overall elasticity of the wetsuit, especially in the armpit area.

The jacket features a reinforcement on the chest for greater protection during charge and reinforcements on the elbows. The pants have similar reinforcements on the knees.

CARBON SKIN

CARBON SKIN is made with a smooth skin / open cell neoprene.

The material differs from the material used for classic smooth skin / open cell neoprene wet-suits as the external smooth skin is coated with a polyurethane film, with a carbon fiber finish, which makes the material highly resistant to abrasion and tear.

This special neoprene simplifies the wearing and stripping of the wetsuit by making it a safer operation. CARBON SKIN, thanks to these features, can be used when spearfishing in situations where the wetsuit is exposed to interference with the sea bottom and rocks.

The external coating also protects the wetsuit from UV rays.

CARBON SKIN has all the mechanical advantages featured by standard smooth skin / cell wetsuits versus wetsuits with lining such as: softness, elasticity and the property of drying very fast.

NEW

THE EXTERNAL SMOOTH SKIN IS COATED WITH A POLYURETHANE FILM, WITH A CARBON FIBER FINISH, WHICH MAKES THE MATERIAL HIGHLY RESISTANT TO ABRASION AND TEAR.

**"EASY LOCK"
BUTTON
SYSTEM,
DESIGNED
BY C4**

This neoprene also features a higher thermal capacity compared to a standard neoprene rubber of the same thickness. In other words, it behaves like a macro cell rubber when it comes to elasticity and softness but has micro cell rubber neoprene when it is at the peak of its compression, at high depths.

This last feature is easily encountered as the floatability of the wetsuit is also increased so as to require, for a wetsuit made with a standard neoprene of the same thickness, an additional 0.5/1.0Kg of weight on the belt.

The elastic memory of this neoprene is superior making it more resistant to compression over time.

The pants and jacket have a preformed and anatomical design. Wrists and ankles feature a re-inforcement made in folded neoprene.

CARBON SKIN features the new "Easy Lock" button system, designed by C4. These locks have been specifically designed to lock the jacket in position in the crotch area minimising obstruction and allowing the diver to unlock the jacket with just one hand.

CARBON ROCK

The exclusive design of this wetsuit features a background in carbon fiber color with spots of 3D camouflaged sea bottom. This solution breaks the image of the diver increasing the camouflaged effect. CARBON ROCK features the new "Easy Lock" button system, designed by C4. These locks have been specifically designed to lock the jacket in position in the crotch area minimizing obstruction and allowing the diver to unlock the jacket with just one hand. CARBON ROCK is available in three thicknesses: 3.0mm, 5.0mm and 6.5mm. Jacket and Pants are sold separately in five sizes.

ZERO PLUS

NEOPRENE SOCKS

The anatomy and fashion of the ZERO PLUS neoprene socks are the same of the ZERO model. Compared to the ZERO, however the materials used are different.

The ZERO PLUS is in fact mainly made of single-lined neoprene, smooth externally and with a super elastic lining inside, without the presence of seams. The use of these materials makes these neoprene socks extremely elastic and with a high thermal capacity.

The lining used for the front part of the fingers, the sole and the heel is reinforced and anti-abrasion.

The anatomy is differentiated between the right and left foot.

Available only in 5mm thickness and six sizes, from size XS to XL.

NEOPRENE SOCKS ZERO

The design of these neoprene socks has been developed down to the smallest detail. We have used **different materials for each panel making these neoprene socks** the most comfortable and resistant on the market. The panel of the instep is made with elastic lining, the panel on the fingers is warm and anti-cut, the one on the sole and on the heel is highly resistant to abrasion without any undesirable sewings. Zero features a left and a right.

POLYETHYLENE SOCKS DYN

These socks are made in high modulus thermoplastic polyethylene. This waterproof fabric is among the toughest materials available to manufacture sporting clothing goods and it features a **certified level 5 anti-cut resistance**. It can be used in the pool, replacing the classic neoprene socks, with a reduced thickness and an increased feeling. It can also be used in warm or cold waters by wearing it over a 2-3mm neoprene sock. The socks are reinforced in the ankle area for a better grip with the fin footpocket. They are available in five sizes, from size XS to size XL.

MASK **FALCON**

FALCON has been conceived and designed specifically for deep freediving. The greatest feature of this mask is the low internal volume, obtained thanks to a design focused on containing space and a single piece structure.

The silicone skirt features an inner gasket and a velvet finish that greatly increase its sealing capacity.

The geometries are highly hydrodynamic and the mask travels through water without any tensions typical of deep dives and fast ascents.

The field of vision has been optimised so has to be reduced in the unnecessary areas but allowing a great vision for spearfishing too.

The buckles are attached to the mask skirt allowing for a very good and even fitting when wearing the mask.

PLASMA is a mask made in anal-
lergic silicone and it is designed
specifically for free diving and
spearfishing.

It features a wide field of vi-
sion and an extremely redu-
ced internal volume. The field
of vision of PLASMA has been
optimised thanks to two fac-
tors: the geometry of the len-
ses and the reduced distance of
the lenses from the eyes. This has
been achieved by manufacturing the
mask in a single piece.

PLASMA XL has a similar geometry
and technical features but it's been
designed 10% larger than the standard
PLASMA, increasing the comfort but
not compromising the small internal
volume.

SNORKEL **MISTRAL**

Mistral is a snorkel specifically designed for freediving and spearfishing. It features an anatomical bite in non-allergenic silicone for long use. The tube is molded in two different materials with a different hardness. The central part of the tube is made in semi-rigid thermoplastic and the upper part of the snorkel is made in a softer more flexible material.

SPECIFIC DETERGENTS

In the past twenty years, because mask skirts have been manufactured in synthetic liquid silicone rather than natural rubber, the problem of the fogging of the lenses has greatly increased.

Silicone oils must be added to the basic silicone material to be able to mould the mask skirt at high temperatures (over 150C). During and after moulding these oils migrate on the lenses creating a sort of film which causes the fogging.

The cooperation between C4 Srl, manufacturer of diving products, and REAL CHIMICA Srl, world leader in the creation and manufacturing of cleaning products, such as the renown "Chantecalir", has started a year ago with the intent of solving, once and for all, the fogging problem on diving products.

ABSOLUTE CLEANER

The first degreasing products on the market specifically designed for diving masks, new and used, which prevents fogging problems and no side effects. Available in containers with sprayers in size 50ml and 250ml.

ORION

0LIGHTC40R

New generation flashlight manufactured in anodised Anticorodal 6061 Aluminum and designed for spearfishing and freediving. Thanks to its advanced technical features, it can be used in all sorts of diving activities.

ORION features a Led charge indicator. It is red when the USB cable is inserted and the battery is charging. The same Led turns green when the battery is fully charged. This Led is visible when the bottom of the flashlight is unscrewed and the flashlight is in charging mode.

This flashlight also features a second Led which indicates the charge status of the battery during use. This led is visible through the transparent flashlight bottom part. The led turns on when the flashlight is turned on. It has a fixed green light when the battery is charged and it starts blinking when the battery is almost out of power.

ORION comes with a Type C / Type C charging cable and the charging time, with a 5V 3.0A charger, is 1h50min.

It also comes with an adapter which transforms the Type C / Type C cable into a Type C / USB cable to be used with the less powerful but more popular 5V 1.5A charger. In this case, the charging times is longer: 4h20min

BUOYS TORPEDO

The construction of the TORPEDO buoys and their oversized valve allow the buoy to be inflated up to a pressure of 29 PSI bar (2 bar) making it ideal for blue water hunt-ing.

The torpedo buoys are made with 0.7mm PVC and feature two handles on the sides, a handle on the back, 2 stainless steel D-rings and a swivelling carabiner.

The buoys, when deflated, can be rolled up with a very small volume. The buoys are supplied with an inflation adapter for a standard bicycle pump.

The buoys are available in three sizes: 15L, 30L, 45L.

FLOAT **OPEN SEA 29**

OPEN SEA 29 is manufactured in high resistance PVC material by "drop stitch" technology. The construction and the high capacity valve allow this board to be inflated at 29PSI (2 bar) making it ideal for blue water fishing. When the buoy is deflated it can be rolled away in a very small space.

OPEN SEA 29 features 6 stainless steel D-rings on the bottom and 6 on the sides. The 6 D-rings on the sides feature elastics to carry spearguns.

Handles are featured on the top and on the sides.

On the bottom there is a pocket that can be used to insert a 1Kg weight to better stabilise the float.

OPEN SEA 29 is supplied with a high visibility 30x30cm flag and a 90cm long flag pole.

A pump, a bag and a repair kit are also supplied together with the float.

Size 87cm x 30cm x 15cm
90cm flag pole and 30x30cm flags
12 stainless steel D-Rings
3 handles

0BUOYC4OS29

STANDARD

FLOAT **OPEN SEA 15**

OPEN SEA 15 is the simpler version of float OPEN SEA 29, but it is manufactured with the same materials and technology.

The float is very resistant and can be inflated to a pressure of 15PSI (1bar). OPEN SEA, when deflated, it can be rolled and stowed away in a very small space.

It features 6 stainless steel D-rings on the bottom and 2 on the sides
OPEN SEA 15 is supplied with a high visibility 30x30cm flag and a 90cm long flag pole

Dimensions 87cm x 30cm x 15cm
90cm flag pole and 30x30cm flags
8 stainless steel D-Rings

STANDARD
SET UP

BOARD **CRUISER**

The board CRUISER is made by "drop stitch" technology, the same manufacturing process used to make inflatable surfing boards and SUPs. Thanks to this technology, great buoyancy and sturdiness can be achieved with a limited volume. CRUISER is manufactured in high resistance PVC with an anti-skid EVA pad on the top part and a quick inflation/deflation valve. When not inflated, it can be rolled for transportation.

The board features 9 stainless steel D-rings and 4 rubber bands for transportation of spearguns and accessories. It also features an elastic system in the top front for transportation of accessories.

CRUISER comes with a high visibility 12"x12" flag, a backpack, a pump, and a repair kit.

Dimensions 34" x 24" x 4"

FLOAT **RED DRAGON**

Red Dragon is manufactured in TPU coated NYLON 420D by high frequency welding. The size of this buoy is 90x35cm.

On the bottom part there are two pockets containing two 100g lead weights to stabilise the buoy during use.

Five TPU D-rings are also positioned on the bottom part and they are connected by an elastic string.

On the top part, RED DRAGON, features a 20x25x5cm pocket with a velcro closure to carry objects and a TPU hard handle.

The flag is the same one featured on the OPEN SEA buoy models.

Size 90cm x 35cm

90cm flag pole and 30x30cm flag.

5 TPU D-Rings and a large pocket.

1 handle

0BUOYC4RD

KNIFE **VIKING**

VIKING is a knife featuring innovative characteristics and design.

The handle is made of thermoplastic material, co-molded with the metal body of the knife. At the base of the handle, there is a high-power whistle which can be very useful in case of emergency.

The 88mm blade, made in AISI304 stainless steel, features a razor grind, a specifically designed tothing for cutting the lines and a window for disengaging the shafts.

The blade has a central retaining tooth coupling that works, both during in-secton and extraction, thanks to the the elastic memory of the sheath.

The sheath is made of thermoplastic material with high mechanical re-sistance and low water absorption. It has two double holes for attaching it to the belt.

The knife is also supplied with two rubber straps.

NEW

TWO RUBBER
STRAPS WITH
STAINLESS STEEL
BUCKLES FOR ARM
AND LEG.

KNIVES **NAIFU WHITE**

NAIFU and NAIFU S WHITE feature a white teflon coated blade. This particular finish makes the blade more resistant to wear and reduces friction to cutting. The blade is also easier to clean and to sanificate.

The handle is made in white thermoplastic and in combination with the white blade it makes the knife extremely visible in case of loss on the bottom of the sea.

0KNIVESC4NAW

NAIFU WHITE

PROTECTION OF THE BLADE FROM OXIDATION

KNIVES **NAIFU**

NAIFU and NAIFU S feature an innovative and ergonomic design.

NAIFU is a belt knife with a total length of 204mm and a blade length of 94mm. NAIFU S is a smaller knife, designed to be carried on the arm, with a total length of 144mm and a blade length of 66.5mm.

The handle and the sheath are manufactured in recyclable POM material. This is a very sturdy and auto lubricating material with excellent mechanical properties and low water absorption.

NAIFU has a locking system between

the knife and the sheath which makes it for an easy extraction and insertion.

The blade of NAIFU S is inserted all the way in the handle making it extremely sturdy. NAIFU's blade features a shaft remover and comes out from the bottom of the blade so that it can be used as a light hammer.

A very important feature on the NAIFU knives is that the blade is machined to create a razor cutting edge whose geometry greatly increases its cutting and penetrating effect.

Both knives are delivered with two rubber straps with stainless steel buckles for use on the arms or legs. NAIFU sheath also features two holes on the bottom so that an additional elastic can be used to hold the knife in position.

C4
accessories

MB CONCEPT & DESIGN

Marco Borchini

Marco Bardi and the accessories

From the very first experiences, I felt the need to pay the utmost attention to my equipment, with an obsessive relationship that allowed me to always feel safe when spearfishing.

I have pushed myself in search of new solutions, to increase the pleasure of spearfishing. Many accessories that I have created have become an added value that has allowed me to combine comfort and efficiency.

Marco Bardi

You can tell the level of a spearfisherman also by the details of his equipment

The design of this new accessories line is something I really care a lot about. It was possible to realize it only with the people who have always believed in me, allowing me to study, select, test and create each product.

For this reason, I have chosen to work with C4. In this company, I have found the will to carry out a reliable and constant project over time, based on the common passion for this sport.

The accessories line, which bears my name, is a constantly evolving project. Our goal is in fact to improve and make even more comfortable the small equipment that we consider fundamental for the success of day out spearfishing.

Marco Borchi

Ergonomic fin insoles

C4 insoles have been designed specifically for diving. The design and materials used are specific for the use in diving fin shoes.

The insoles adapt perfectly to all C4 fin pockets but they can also be used with many of the other foot pockets on the market, including: Mares, Cressi, Beuchat, Seac, Omersub, Salvimar and Pa-thos, among the most popular ones.

C4 insoles allows the use of fin pockets of a larger size with neoprene socks in a different thick-ness.

Thanks to their anatomical shape, C4 insoles increase the comfort inside the fin shoe pockets which, having the same shape for the right and left foot, feature many empty spaces.

The reduction of space also minimises the flow of cold water inside the shoe thus keeping the foot warmer in the winter and reducing the risk of cramps.

The insoles greatly improve the planar shape of the shoes under the foot arch, eliminating the void and thus increasing the control of kicking and optimising the propulsive force.

C4 insoles are available in 3 sizes that can be used in footpockets from size 38 to 45, thanks to the possibility of being cut to size on pre-existing cutting lines.

Marco Bardi

Once you try them once, it's guaranteed you will never go fishing without them

Belt fish holder kit

This belt fish holder can be used both on the right and on the left and can be placed on the belt without removing the weights.

0ACMB003

Liquids lost by the fish on the belt attract other nearby fish.

Allows you to quickly store away the fish allowing you to start quickly to a new action.

Putting a few fish on the belt helps camouflage the diver and intrigue other fish.

Marco Bardi

Without the fish holder on my belt it is as if I am missing something essential and this is the best I have ever used

Polyethylene Gloves Dyn

These gloves are made in high modulus thermoplastic polyethylene.

0GLC4DYS
0GLC4DYM
0GLC4DYL
0GLC4DYXL

The material has anti-slip properties allowing the diver to grab fish and other objects in complete safety.

Made with waterproof fabric featuring a certified level 5 anti-cut resistance.

They are ideal during the summer or in warmer waters and the thermoplastic polyethylene material guarantees excellent hand sensitivity thanks to its softness.

DYN gloves are available in 4 sizes: S, M, L and XL.

Marco Bardi

When you wear these gloves you feel safer and more effective

2mm superstretch undersuits

Preshaped neoprene undersuit made in single lined 2mm neoprene with a highly stretchable lining on the inside and smooth skin neoprene on the outside. Available in two versions: basic and with hood.

Marco Bardi

A neoprene wetsuit with an excellent price quality ratio

This undersuit improves the diver thermal protection in between seasons, when wearing a thicker wetsuit is not yet a necessity, without compromising his comfort.

The very elastic hood features a minimal thickness and can be used both with a full wetsuit and under a single piece suit without a hood.

CON CAPPuccio

The hooded version can also be used in watersports where protection is needed - freedom of movement, such as freediving training in the pool and swimming in the sea.

0ACMB004S-2/6

BASIC

The model without hood is the most used in spearfishing because it facilitates the freedom of dressing and wearing under the wetsuit.

0UC4S02S-2/6

Prodotto realizzato con neoprene super elastico liscio all'esterno e con fodera scorrevole all'interno.

The undersuit is longer on the pelvis for a higher thermal protection which makes it easier to wear.

It comes in 4 sizes from 2 to 5.

It can be wore under any wetsuit, including single lined wetsuits.

MADE IN ITALY

Extreme Antifog

The ideal product to be applied on the glass lenses of diving masks which have been previously treated with the ABSOLUTE CLEANER and on the polycarbonate lenses of swimming goggles.

Marco Bardi

You will never spit again on your mask lenses

Available in containers with sprayers in size 50ml and 250ml .

0KC4A
0KC4A050
0KC4A250

MADE IN ITALY

Absolute Cleaner

The first degreasing products on the market specifically designed for diving masks, new and used, which prevents fogging problems and no side effects.

Available in containers with sprayers in size 50ml and 250ml .

0KC4C
0KC4C050
0KC4C250

Marco Bardi

After using it once, fogging has been just an old memory

MADE IN ITALY

0KC4GL001

Neoprene Glue

Liquid black glue for the repair of all neoprene equipment. 30 gram tube with spout that facilitates application.

It guarantees high resistance in all types of bonding.

30 g.

Made in Italy under European regulations.

Marco Bardi

This is the best glue I've ever used."

MADE IN ITALY

Cyano Acrylate Glue

Glue featuring a fast and strong adhesive power. 20 gram tube with a safety cap that allows it to be used for a long time without the risk of the glue degrading.

0ACMB005

20 g.

Ideal for quick bonding of almost all types of materials.

Made in Italy under European regulations.

It comes with detailed instructions with a tutorial video.

Marco Bardi

Excellent easy to use glue

MADE IN ITALY

300+400 Fin Guides Repair Kit

Repair kit specifically designed to substitute broken fin rails on all C4 carbon fiber blades featured on 300 and 400 fins.

The kit features two thermoplastic rails and a 2g cyanoacrylate glue specific for bonding plastic and carbon fiber.

0KC4RP01

An instruction manual and a tutorial video are easily accessible through a QR code featured on the package.

Marco Bardi

Substituting the rails is really easy with this kit

MADE IN ITALY

Water Rail Constant

Water rails are T-shaped profiles to be applied to the sides of the blades to channel the water and stabilise the kick. They are made of EPDM, a technical material featuring high elasticity and resistance. Elasticity is essential to channel the water without affecting the performance of the blade.

C4 Water Rails Constant can also be glued to plastic blades - carefully following the indicated instructions.

It is sold by the meter in a 2 color version: white and black.

Marco Bardi

We recommend gluing the rails with the specific C4 rapid glue.

Professional Line Winder

High capacity floating line winder.

Specific eyelets to block the line to size, both on the diver's side and on the buoy side.

Double side handle to facilitate the rewinding of the line.

0ACMB001

Marco Bardi

I use this line winder when I need a thick line to rewind and calibrate quickly

Strong buoyancy to compensate for the weight of the line.

Elastic Bungee

This elastic bungee facilitates the insertion of the line into the speargun mechanism even while wearing gloves.

Marco Bardi

It is an indispensable accessory for the correct setup of every speargun

0ACMB002SS

It reduces the stroke end of the shot reducing the wear of the monofilament on the shaft.

It reduces the jerks of the caught fish - limiting the risk of losing it.

0ACMB002CS

It avoids line vibrations on the speargun tube, that frighten the fish.

Quick Release Weight

1Kg quick release weight, to quickly change the floatability in the water or to be positioned on the bottom, attached to the buoy's line.

Features a D-Ring for quick attachment of a carabiner and line.

Easy to insert and remove from any weight belt.

0LC41000S

Black anti-glare and impact resistant plastic protection.

Marco Bardi

I have always said that any spearfisherman should have at least one or two quick-release easy to use weights on the belt"

Lead Ankle Weight

Anatomic 500g ankle lead weight ideal for balancing the flotation of the legs.

Marco Bardi

Very comfortable in every situation in the water

0KC4ALW

Painted with a soft protective paint.

It features two holes on each side to allow better fixing.

Coated Pvc

Waterproof Bags

Sturdy watertight bags for storing and keeping clothes and gear dry. Featured in two sizes. The 10 Lt bag is ideal for carrying documents and small items. The 45 Lt bag is ideal for clothes and bigger equipment.

Easy to wash and dry them thanks to the specific handle on the bottom to store it upside down.

0BAGC4ST45

Waterproof closures that make them watertight and floating, even in case of an accidental fall into the sea.

0BAGC4ST10

Made with high resistance coated PVC they are

Easy to carry and to store.

Marco Bardi

To me, dry bags are an indispensable accessory."

Floating Sunglasses

C4 sunglasses have been specifically designed for the use at sea.

Marco Bardi

They won't make you catch more fish but they will surely make you look cool

On the inside of the frame they feature a sponge, made of floating and water-repellent material, that allows them to be easily recovered on the surface, in case of an accidental drop in the water.

The glasses have polarized mirrored lenses ideal for the use on a boat.

They feature detachable arms and an elastic strap.

they are sold in a rigid EVA box with a lens cleaning cloth.

0FLC4SUN

Mask Box

Protective container for masks, rigid and light, made of thermoformed polyethylene coupled with polyester fabric.

Marco Bardi

In your bag, this box will do a great job in protecting your mask

0MAC4BOX

The internal fabric protects the mask from scratches and bumps.

The container features a zipper and can be very useful to carry other objects such as: video cameras, diving computers and car keys.

Swimming Cap

Freediving and swimming cap made in high quality anallergic silicone in a variable thickness.

Marco Bardi

The greater thickness of the this cap does not compromise its comfort thanks to the highest quality silicone used to manufacture it

Extremely soft and comfortable, it features a special carbon fiber finish and an ergonomic shape.

0SC4SSC001

SoftFlask

500MI soft flask made in TPU with a silicone mouth piece featuring a nylon lanyard for easy carrying.

It is floatable and it can be operated with just one hand.

Marco Bardi

The most comfortable water bottle I have ever used at sea

0KC4CWB

Neoprene Car Seat Cover

Water repellent protective cover for car seats made of 3mm Nylon double lined neoprene.

0KC4NCS

Thanks to this accessory, the diver can drive between diving sites wearing a wetsuit without the risk of getting the car seats wet or dirty.

Marco Bardi

In my car, there are always two car seat covers

Pom Carabiner

Standard shape carabiner made in highly resistant Nylon.

Marco Bardi

I believe that carabiners are extremely useful accessories - and this one is the one I use most

0ACMB006

Light and ease of use.

It does not produce unwanted noise or light reflections.

Exclusive design specific for spearfishing.

BREAKING FORCE 60 kg. !!

Swivelling Pom Carabiner

Nylon carabiner featuring a double eyelet that rotates 360°. Ideal for connecting two lines, even different ones, and avoiding the classic line twisting.

It is light and does not cause the line to sink.

It allows you to always have the line stretched out in a linear way without it rolling up on it-self.

Ideal for carrying objects that can get twisted together on the buoy.

0ACMB007

Marco Bardi

I hate the line and objects that twist around themselves and, thanks to this carabiner the problem is solved

Line Floater

Specific float for lines of all kinds used in spearfishing.

Marco Bardi

After using it for the first time, you'll regret not having done it before! It's very comfortable

0ACMB008

It allows the line to remain vertical above the scuba diver, limiting its intrigue in the roughness of the seabed.

It makes it easier to locate the exact point on the seabed where the line is positioned.

You can quickly adjust the size as needed.

Elastic Lines For Buoys

Special line that stretches effortlessly up to 3 times its original size. Available in 3 sizes: 4m, 8m and 12m.

It allows to always keep the buoy above the vertical of the diver.

In the event of a current, it reduces the voltage on the buoy and facilitates its transport.

Marco Bardi

The elastic line is simply indispensable

0ACMB009
0ACMB010
0ACMB011

It reduces the traction of the waves and the wind on the buoy and reduces the risk of losing it.

Crimping Plier

This plier has been specifically designed and manufactured by C4 for the crimping of single or double sleeves in the most commonly used sizes in spearfishing.

The holes featured on the head of the plier have diameters: 2.2mm, 3.0mm e 4.0mm.

The plier features a hot tempered steel head and metal sheet handles.

The closure of the jaws has a minimum tolerance, allowing for a precise crimping of the sleeves on nylon monofilament and other types of lines in the most commonly used diameters.

0TOC4CRI

Marco Bardi

Once you realise the importance of a line with sleeves well crimped, you just can't go without it anymore.

Sleeves For Line Crimping

Crimp sleeves, ideal for monofilaments and rigid lines. Made of burnished metal.

Marco Bardi

Line crimping is a fundamental operation in spearfishing. When you have specific accessories available, it becomes a pleasure to do it

0ACMB012

Excellent seal with a minimum volume.

Easy to use, they simplify all crimping operations.

Specific for underwater fishing.

Stainless Steel D-Ring

D-ring made in stainless steel to facilitate the attachment of a carabiner or other accessories on the belt.

0KC4DR01

It can resist strong pulls - such as the ballast retrieval from the seabed.

Made in Italy with high quality stainless steel.

It completes the weight belt, with a very sturdy attachment point.

Marco Bardi

I have never used such a reliable D-Ring

O-Rings for shaft barbs

O-RINGS have the purpose of keeping the shaft barb in position. The movement of the barb can interfere in the shooting phase, or cause noise that can scare the fish. To meet the various needs - 3 models with different features have been developed.

Marco Bardi

"Having the correct type of O-Ring for shaft barbs that best meets our needs gives a certain satisfaction. With this assortment of O-Rings, the era of adapted and uncomfortable O-Rings is over."

Red O-ring 60 Shore

Easy to spot on the surface, thanks to the red color that goes darker in depth.

It is easy to grab even with gloves thanks to a small protrusion.

The 60 shA hardness allows this O-Ring to be sufficiently elastic for any type of shaft but, at the same time, to have greater resistance over time.

It is therefore suitable for those who prefer the balance between practicality, elasticity and resistance.

0ACMB015

Black O-ring 50 Shore

Made with a hardness of 50 shA, it is more elastic than the red model but slightly less resistant to cuts and tears.

It is easy to grasp, even with gloves, thanks to the small protrusion, it is suitable for those who prefer elasticity and comfort over greater resistance.

0ACMB014

Pure latex O-Ring

The pure latex O-Ring is the most elastic model. It is less bulky because it has a reduced thickness and it has no protrusion.

The major advantage of this O-ring is that it allows for a cleaner line of sight but is slightly less comfortable in its use.
